## Ford car price prediction using linear regression

In this project we are going to perform Ford car price prediction using linear regression by following steps

- 1. Data Loading
- 2. EDA (Exploratory data Analysis)
- 3. Data cleaning
- 4. Data processing
- 5. Splitting the Dataset
- 6. Model training
- 7. Model testing
- 8. Model evaluation

### About this Dataset

1.model - > Ford Car Brands 2.year - > Production Year 3.price - > Price of car in \$ 4.transmission - > Automatic, Manual, Semi-Auto 5.mileage -> Number of miles traveled 6.fuel\_Type -> Petrol, Diesel, Hybrid, Electric, Other 7.tax -> Annual Tax 8.mpg - > Miles per Gallon 9.engineSize - > Car's Engine Size

```
In [33]: ## Importing important libraries
import numpy as np
import pandas as pd
import matplotlib.pyplot as plt
import seaborn as sns
In [34]: ## Loading the Dataset
df = pd.read_csv("ford.csv")
```

#### **EDA**

Here price is Dependent variable & Other columns will be Independent variables. Now, we have to select which columns to use in our model by checking correlation of each column with price through EDA.

```
In [37]: df.info() ## Checking null values & datatype of each column
```

```
RangeIndex: 17966 entries, 0 to 17965
Data columns (total 9 columns):
# Column Non-Null Count Dtype
0 model
                  17966 non-null object
              17966 non-null int64
17966 non-null int64
   year
2 price
transmission 17966 non-null object
mileage 17966 non-null int64
fuelType 17966 non-null object
                   17966 non-null int64
6
    tax
                    17966 non-null float64
     mpg
    engineSize 17966 non-null float64
8
dtypes: float64(2), int64(4), object(3)
memory usage: 1.2+ MB
```

<class 'pandas.core.frame.DataFrame'>

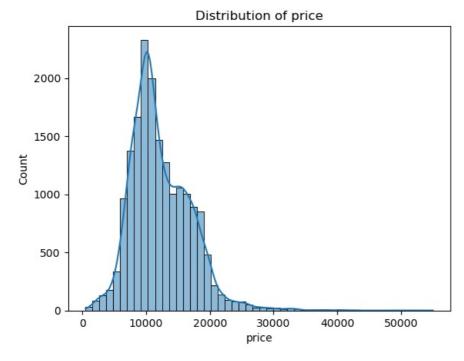

```
In [38]: df.describe() ## Statistical Analysis of each numeric column
```

Out[38]:

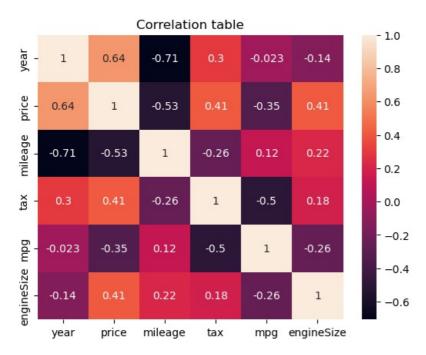

```
In [39]: df.isnull().sum().sum() ## There are no null values
Out[39]: np.int64(0)
In [40]: df.isna().sum().sum() ## There are no na values
Out[40]: np.int64(0)
In [41]: df.duplicated().sum() ## Dataset has 154 duplicate rows
Out[41]: np.int64(154)
In [42]: ## Checking the Distribution of prices by histogram sns.histplot(data=df,x="price",bins=50,kde=True) plt.title("Distribution of price has outliers on the right side which means there are few cars with very price"''
```

Out[42]: 'The distribution of price has outliers on the right side which means\n there are few cars with very price'

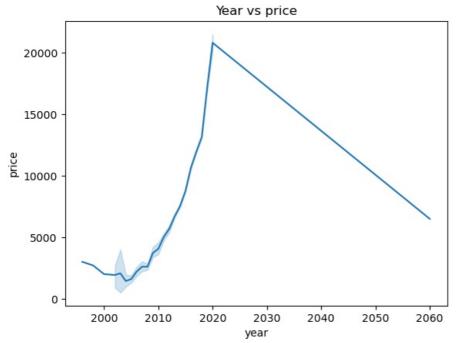

```
In [43]: ## Plotting the correlation between numerical variable using heatmap
sns.heatmap(df.corr(numeric_only=True),annot=True)
plt.title("Correlation table")
'''year,tax,enginesize are positively correlated to price
whereas, mileage & mpg are negetively correlated'''
```

Out[43]: 'year,tax,enginesize are positively correlated to price\nwhereas, mileage & mpg are negetively correlated'

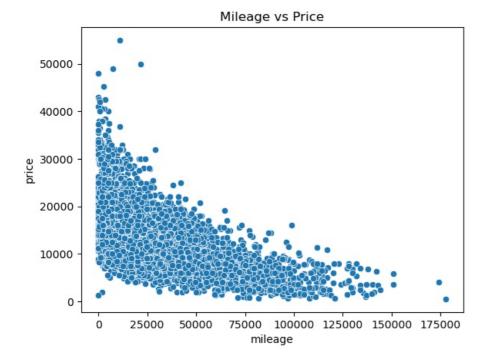

```
In [44]: ## Checking relation between year & price through line chart
sns.lineplot(x="year",y="price",data=df)
plt.title("Year vs price")
''' Here we can see there are entries with year (year of release)
in 2060 as well which is impractical & should be removed from datset
Year has high posituve correlation with price & should be used in model'''
```

Out[44]: ' Here we can see there are entries with year (year of release) \nin 2060 as well which is impractical & should be removed from datset\nYear has high posituve correlation with price & should be used in model'

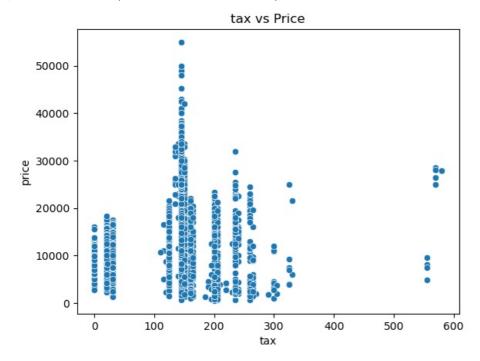

```
In [45]: ## Checking the relation between mileage & price using scatter plot
    sns.scatterplot(data=df,x="mileage",y="price")
    plt.title("Mileage vs Price")
    '''Mileage has clear negetive correlation with price & Should be used in model'''
```

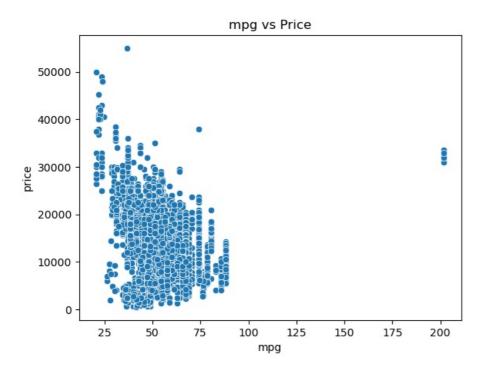

```
In [46]: ## Checking the relation between tax & price using scatter plot
sns.scatterplot(data=df,x="tax",y="price")
plt.title("tax vs Price")
'''Tax has clear positive correlation with price & Should be used in model'''
```

Out[46]: 'Tax has clear positive correlation with price & Should be used in model'

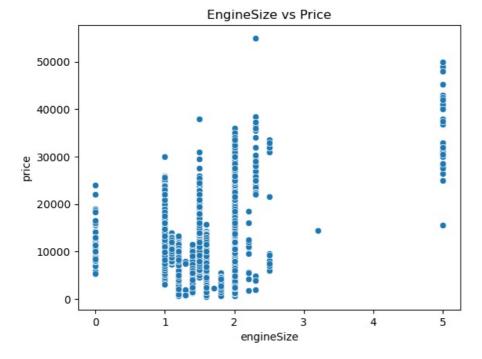

```
In [47]: ## Checking the relation between mpg & price using scatter plot
sns.scatterplot(data=df,x="mpg",y="price")
plt.title("mpg vs Price")
'''mpg has clear negetive correlation with price & Should be used in model'''
```

Out[47]: 'mpg has clear negetive correlation with price & Should be used in model'

```
In [48]: ## Checking the relation between engineSize & price using scatter plot
    sns.scatterplot(data=df,x="engineSize",y="price")
    plt.title("EngineSize vs Price")
    '''EngineSize has clear positive correlation with price & Should be used in model'''
```

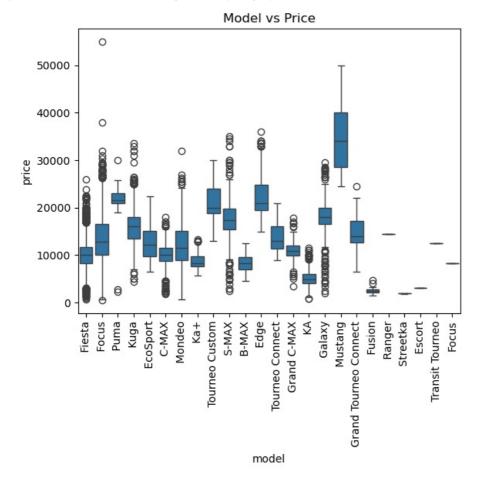

Out[48]: 'EngineSize has clear positive correlation with price & Should be used in model'

Now Let us compare the relation of price with categorical variable

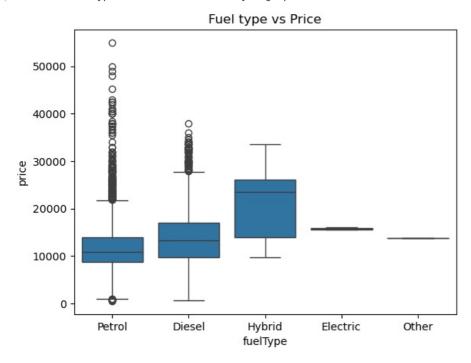

```
In [49]: ## Checking the relation of model with price
sns.boxplot(data=df,x="model",y="price")
plt.xticks(rotation =90)
plt.title("Model vs Price")
'''Some models like Mustang has very high price
so its better to use the variable in model'''
```

Out[49]: 'Some models like Mustang has very high price \nso its better to use the variable in model'

```
In [50]: ## Checking the relation of Fueltype with price
sns.boxplot(data=df,x="fuelType",y="price")
plt.title("Fuel type vs Price")
'''Some Fuel types like Petrol has very high price
so its better to use the variable in model'''
```

Out[50]: 'Some Fuel types like Petrol has very high price \nso its better to use the variable in model'

```
In [51]: ## Checking the relation of transmission with price
    sns.boxplot(data=df,x="transmission",y="price")
    plt.title("Transmission vs Price")
    ''' There iss no much relation beetween the transmission & price
    so this variable can be dropped'''
```

# 

transmission

#### **Data Cleaning & processing**

```
In [52]: ## Dropping duplicate records
          df.drop_duplicates(inplace=True)
          ##Dropping the record with year as 2060 from the dataset
          data = df[df["year"]!=2060]
In [54]:
          data
Out[54]:

```

### Conclusion

Out[78]: 1034

R2 & Adjusted R2 with one hot encode data = R2 Score-0.86, Adjusted R2 Score: 1.82 R2 & Adjusted R2 with label encode data = R2 Score-0.80, Adjusted R2 Score: 0.67

Model gives better results with one hot encoding
